DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-8 are rejected under 35 U.S.C. 102(b) as being unpatentable by US Patent 6,414,657 to Kasahara et al.

In reference to claim 1, Kasahara teaches a plasma display panel that varies gradation through the use of subframe images (column 3, lines 42-46). Gradations are produced by implementing differently weighted subframes (column 6, lines 12-18 and tables). Kasahara also teaches the use of superpositioning methods in certain areas with certain gradation relating luminance gradient values between neighboring pixels (column 34, lines 13-16).

In reference to claim 2, on column 4, lines 5-11, it is apparent that Kasahara's invention divides an area of predetermined size to implement the luminance correction (column 24, lines 22-26).

In reference to claim 3, is rejected largely on the rejection of claim 1. Kasahara also teaches that the area is determined by also comparing the pixel gradation of moving objects from previous and present frames (figure 18, items 38 and 42).

Claim 4 is rejected on the grounds presented in the rejection of claim 2.

Claims 5-8 are rejected on grounds presented in the rejection of claim 1. Kasahara describes in his claims 1-4 (column 34) how his invention conducts gradient calculations based on both pixel proximity and image motions.

Response to Arguments

3. Applicant's arguments with respect to claims 1-8 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

US Patent 6,593,903 to Nakamura et al.
